Comer and Gould's *Psychology Around Us* demonstrates the many-often surprising, always fascinating-intersections of psychology with students' day-to-day lives. Every chapter includes sections on human development, brain function, individual differences and abnormal psychology that occur in that area. These "cut-across" sections highlight how the different fields of psychology are connected to each other and how they connect to everyday life. Every chapter begins with a vignette that shows the power of psychology in understanding a whole range of human behavior. This theme is reinforced throughout the chapter in boxed readings and margin notes that celebrate the extraordinary processes that make the everyday possible and make psychology both meaningful and relevant. The text presents psychology as a unified field the understanding of which flows from connecting its multiple subfields and reinforces the fact that psychology is a science with all that this implies (research methodology, cutting edge studies, the application of critical thinking).

Devoid of the often mind-numbing technical "psychobabble" and "medicalbabble" so characteristic of other books on the subject, this collection of abnormal psychology cases uses clear, accessible language and explanations, and a unique case conference format. Each case begins with some background information and, similar to Ellery Queen mysteries, readers are challenged through questions at various points to try and decide what is going on based on the amount of information presented. As each case gradually unfolds, readers are drawn deeper into the case and must keep on reading to discover the case's assessment(s), evaluations, diagnoses, treatment plan(s), possible medications, and prognoses. The book features real cases based on a variety of psychopathologies--all involving patients/clients from a wide variety of cultural, ethnic, racial, religious, social, and socioeconomic backgrounds--and all based on the author's own experiences as a practicing social worker and psychologist. Anxiety Disorders I. Anxiety Disorders II. Dissociative and Somatoform Disorders. Mood Disorders. Personality Disorders. Substance Related Disorders. Eating Disorders. Sexual and Gender Identity Disorders. Schizophrenia and Other Psychotic Disorders. Developmental Disorders. Developmental Disorders II. You Be the Diagnostician! Where Do We Go From Here? abnormal psychology, including health care workers, social workers, educators, etc.

Case Studies in Abnormal Psychology presents a broad range of cases drawn from the clinical experience of authors Kenneth N. Levy, Kristen M. Kelly, and William J. Ray to take readers beyond theory into real-life situations. The authors take a holistic approach by including multiple perspectives and considerations, apart from those of just the patient. Each chapter follows a consistent format: Presenting Problems and Client Description; Diagnosis and Case Formulation; Course of Treatment; Outcome and Prognosis/Treatment Follow-up; and Discussion Questions. Providing empirically supported treatments and long-term follow-up in many case studies gives students a deeper understanding of each psychopathology and the effects of treatment over time.
