Breast cancer can have several symptoms, but the first noticeable symptom is usually a lump or area of thickened breast tissue. Most breast lumps are not cancerous, but it's always best to have them checked by a doctor. You should also see a GP if you notice any of these symptoms: a change in the size or shape of one or both breasts

### Breast cancer in women - NHS

Breast cancer Breast cancer is the most frequent cancer among women, impacting 2.1 million women each year, and also causes the greatest number of cancer-related deaths among women. In 2018, it is estimated that 627,000 women died from breast cancer – that is

approximately 15% of all cancer deaths among women.

## WHO | Breast cancer - World Health Organization

A benign breast lump does not mean you have breast cancer, but certain types of breast lumps may slightly increase your risk of developing cancer. Some benign changes in your breast tissue, such as cells growing abnormally in ducts (atypical ductal hyperplasia), or abnormal cells inside your breast lobes (lobular carcinoma in situ), can make getting breast cancer more likely.

## Breast cancer in women - Causes - NHS
