systems. x List five major segments of a food system. x Discuss the concept of sustainability. x Identify three allied industries of a food system.

Chapter 2: Food Systems and Sustainability

The food system's impacts on the environment are multiple and connected. FCRN, 2016. The food system – spanning production, distribution, manufacturing, consumption and waste disposal – impacts upon the environment in multiple ways. Agriculture is the stage responsible for the majority of these impacts. Chapter 2 gives more detail about how these impacts are categorised and quantified using a life cycle assessment approach.

5.1 Why are the environmental impacts of the food system a ...

Cleaning. Cross-contamination. Buying and eating food. Food hygiene ratings. Best before and use-by dates.

Food safety and hygiene | Food Standards Agency

See Chapter 2 for more on how these impacts can be quantified, and Chapter 3 for more on the greenhouse gas emissions from food systems. Food systems are also important causes of rising scarcity, species loss and land degradation. A substantial amount of the food produced is lost or wasted along the supply chain, causing significant problems.
