Gigantism and Acromegaly brings together pituitary experts, taking readers from bench research, to genetic analysis, clinical analysis, and new therapeutic approaches. This book serves as a reference for growth hormone over-secretion and its diagnosis and treatment for endocrinologists, pediatricians, internists, and neurosurgeons, and for geneticists. Pharmaceutical companies may use it as a reference for drug development and research. Students, residents and fellows in medicine and endocrinology and genetics will also find it valuable as it provides a single up-to-date review of the molecular biology of gigantism and acromegaly as well as recommended approaches to evaluation and management. Acromegaly is a rare pituitary disorder that slowly changes its adult victim's appearance over time: larger hands and feet, bigger jaw, forehead, nose, and lips. Generally, a benign pituitary tumor is the cause and symptoms of acromegaly can vary from patient to patient, making a diagnosis difficult and prolonging suffering for years. Early detection is key in the management of acromegaly as the pathologic effects of increased growth hormone (GH) production are progressive and can be life-threatening as the result of associated cardiovascular, cerebrovascular, and respiratory disorders and malignancies. Accessible, up-to-date overview of the characteristics, state-of-the-art diagnostic procedures, and management of acromegaly and gigantism Provides a unique compendium of endocrinology, genetics, clinical diagnosis and therapeutics Contains contributions from internationally known experts who have treated patients with acromegaly and gigantism

Provides information on programs, research, publications, and services of ERIC, as well as critical and current education information.

The campus novel is one of the best loved forms of fiction in the post-war period. But what are its characteristic themes? What are its prejudices? And what does it take for granted? Originally published in 1990, this is the first study to connect literary, historical, and sociological aspects of modern British universities. It shows that the culture celebrated in British university fiction represents a particular view of humane education which has its origins in the values of Oxbridge. Threats are seen to come from the 'redbrick' and 'new' universities, from proletarians, scientists (including sociologists), women, and foreigners. This exhilarating book makes a nonsense of sociology's reputation for turgid and plodding analysis. Sharp-witted, shrewd, and penetrating, it will be of interest to students of sociology, literature, and for the same wide audience that appears to have an insatiable appetite for stories about university life.

Eminent clinicians and specialists thoroughly review in great detail every aspect of pituitary tumors. The topics covered include prolactinomas, somatotroph adenomas, corticotroph adenomas, thyrotroph adenomas, nonfunctioning tumors, pituitary tumors, invasive adenomas, and pituitary carcinomas, as well as lesions, exclusive of pituitary adenomas, that occur in the sellar region. Also discussed are the new methods in endocrine diagnosis, high resolution imaging, receptor-mediated pharmacotherapy, microsurgical techniques, improved methods of radiation delivery, and the development of a precise and physiologically meaningful classification of pituitary tumors. Much-needed and brilliantly multidisciplinary, *Diagnosis and Management of Pituitary Tumors* offers all those dealing with pituitary cancer patients today's most comprehensive guide to diagnosis and treatment, one whose coordinated treatment strategies have sharply improved long-term survival rates for many patients.

This monograph examines the nature of active learning at the higher education level, the empirical research on its use, the common obstacles and barriers that give rise to faculty resistance, and how faculty and staff can implement active learning techniques. A preliminary section defines active learning and looks at the current climate surrounding the concept. A second section, entitled "The Modified Lecture" offers ways that teachers can incorporate active learning into their most frequently used format: the lecture. The following section on classroom discussion explains the conditions and techniques needed for the most useful type of exchange. Other ways to promote active learning are also described including: visual learning, writing in class, problem solving, computer-based instruction, cooperative learning, debates, drama, role playing, simulations, games, and peer teaching. A section on obstacles to implementing active learning techniques leads naturally to the final section, "Conclusions and Recommendations," which outlines the roles that each group within the university can play in order to encourage the implementation of active learning strategies. The text includes over 200 references and an index. (JB)

It's the new rock and roll. It's the new black. Sustainability is trendy, and not just among hipsters and pop stars. The uncool chemical sector helped pioneer it, and today, companies inside and outside the sector have embraced it. But what have they embraced? Surely not the Brundtland definition of meeting "the needs of the present without compromising the ability of future generations to meet their own needs." Sustainability describes a change in the chemical industry's approach to the external world: to regulators, to greens, to neighbors, to investors and to the general public. Displacing the adversarialism of the 1970s-80s, sustainability is a new approach to social/political conflict, and an attempt to rebuild the industry's long-suffering public image. In practice, it consists of: A 'stakeholder' approach to communications and external relations A rebranding of regulatory compliance and risk management, with the emphasis on their benefits to stakeholders Recognition (and even celebration) of the opportunities, not just the costs, of environmental and social protection The core of this book is a survey of the world's 29 largest chemical companies: how they put sustainability into action (six of the 29 do not), and the six 'sustainability brands' they have created. It begins with a history of stakeholders conflict, before looking at various definitions of sustainability – by academics, by the public and by investors. After the survey and analysis, the book covers sustainability and 'greenwash' plus the ROI of sustainability, and it gives five recommendations.

In *Teaching with Poverty in Mind: What Being Poor Does to Kids' Brains and What Schools Can Do About It*, veteran educator and brain expert Eric Jensen takes an unflinching look at how poverty hurts children, families, and communities across the United States and demonstrates how schools can improve the academic achievement and life readiness of economically disadvantaged students. Jensen argues that although chronic exposure to poverty can result in detrimental changes to the brain, the brain's very ability to adapt from experience means that poor children can also experience emotional, social, and academic success. A brain that is susceptible to adverse environmental effects is equally susceptible to the positive effects of rich, balanced learning environments and caring relationships that build students' resilience, self-esteem, and character. Drawing from research, experience, and real school success stories, *Teaching with Poverty in Mind* reveals * What poverty is and how it affects students in school; * What drives change both at the macro level (within schools and districts) and at the micro level (inside a student's brain); * Effective strategies from those who have succeeded and ways to replicate those best practices at your own school; and * How to engage the resources necessary to make change happen. Too often, we talk about change while maintaining a culture of excuses. We can do better. Although no magic bullet can offset the grave challenges faced daily by disadvantaged children, this timely resource shines a spotlight on what matters most, providing an inspiring and practical guide for enriching the minds and lives of all your students.
