Let's examine a trade agreement between U.S and Mexico. We will examine a simple two good case, brooms and microchips. Each country has 10 workers who can produce either microchips or brooms. A worker in U.S can produce 9 microchips a day or 1 broom a day.

Economics 1 Problem Set 5 - Suggested Answers
Problem set 5 In this question, we consider the market for micro-beer. Suppose that supply in this market is given by $Q_s = p/3$, and the demand by $Q_d = 100 - p$. The government is worried about the consumption of alcohol. In particular, it wants to reduce micro-beer consumption and raise some money to treat alcoholism.

Monetary Economics: Problem Set #1 5 (c) Let denote the elasticity of output with respect to productivity, that is $\epsilon = \frac{y}{L} \frac{L}{y} = \frac{1}{\sigma}$ so that $c = y - \sigma = a - \sigma$. Then from the consumption Euler equation the real interest rate r satisfies $a - \sigma = (r - \delta) + E_t[a_{t+1}]$ Solving for the real interest rate r we get $r = \delta + \sigma E_t[a_{t+1}]$ where $a_{t+1} = a + \epsilon$
