Maxwell's equations represent a synthesis of electromagnetic fields, which led to the discovery of electromagnetic waves, and that light is electromagnetic in nature, with a constant velocity in vacuum, where, μ_0 and ϵ_0 are the permeability and permittivity of vacuum or air.

In physics, electromagnetic radiation (EM radiation or EMR) refers to the waves (or their quanta, photons) of the electromagnetic field, propagating (radiating) through space, carrying electromagnetic radiant energy. It includes radio waves, microwaves, infrared, (visible) light, ultraviolet, X-rays, and gamma rays.. Classically, electromagnetic radiation consists of electromagnetic waves ...

The properties of electromagnetic fields and waves are most commonly discussed in terms of the electric field $E(r,t)$ and the magnetic induction field $B(r,t)$. The vector r denotes the location in space where the fields are evaluated. Similarly, t is the time at which the fields are evaluated.

Radio waves are a type of electromagnetic radiation with wavelengths in the electromagnetic spectrum longer than infrared light. Radio waves have frequencies as high as 300 gigahertz to as low as 30 hertz. At 300 GHz, the corresponding wavelength is 1 mm; at 30 Hz the corresponding wavelength is 10,000 km. Like all other electromagnetic waves, radio waves travel at the speed of light in vacuum.
