Essential Mathematics for Economic Analysis, 5th Edition
 $f(s) = s^{20} + s^{19} + \dots + s^2 + s - 10 = 0$ has a unique positive solution. Since $f(0) = -10$ and $f(1) = 10$, by the intermediate value theorem (Theorem 7.10.1), there exists a number α between 0 and 1 such that $f(\alpha) = 0$. This α is the unique positive root because $f(s) > 0$ for all $s > 0$.

Essential Mathematics for Economic Analysis, 2nd Edition"

"Essential Mathematics for Economic Analysis, "2nd Edition, provides an invaluable introduction to the mathematical tools that undergraduate economists need. The coverage is comprehensive, ranging from elementary algebra to more advanced material, whilst focusing on all the core topics that are usually taught in undergraduate courses on mathematics for economists.

FEATURES An intelligent approach to teaching mathematics, based on years of experience. Mathematical rigour and a strong focus on mathematical reasoning. Large selection of worked examples throughout the book. These are not just specific to economics, as most topics are first dealt with from a purely mathematical point of view before providing economic insight.

Large number of problems for students to solve. Answers to selected questions included in the back of the book. **CHANGES TO THIS EDITION** New Chapter 17 on linear programming. All chapters revised and updated. Even more economic examples and problem material added. Extensive resources for students and lecturers on the companion website. 'The book is by far the best choice one can make for a course on mathematics for economists. It is exemplary in finding the right balance between mathematics and economic examples.' Dr. Roelof J. Stroeker, Erasmus University, Rotterdam.

'The writing style is superb. I found that the style of writing promotes interest and manages to allow intuitive understanding whilst not sacrificing mathematical precision and rigour.' Dr. Steven Cook, University of Wales, Swansea Knut Sydsaeter is a Professor of Mathematics in the Economics Department at the University of Oslo, where, since 1965, he has had extensive experience in teaching mathematics for economists. He has also given graduate courses in dynamic optimization at Berkeley and Gothenborg. He has written and co-authored a number of books, of which several have been translated into many languages. In recent years he has been engaged in an attempt to improve the teaching of mathematics for economists in several African universities. Peter Hammond is a
