In the past 10 to 20 years, significant advances in restorative materials have revolutionized dentistry. 1-5 Esthetic considerations are growing in importance for the restoration of posterior teeth. 6 Composite, compomers, glass-ionomers, and resin-modified glass ionomers (RMGIs) have given dentists a viable and esthetic alternative to amalgam restorations. These materials have become more desirable restoratives because they provide patients with a superior esthetic result, with acceptable ...

*Direct Esthetic Adhesive Restorative Materials*

Acrylic resins replaced silicate cements in the middle of the 20th century as the only esthetic material in dentistry. 1 However, due to dependence on properties that could only be delivered with adequate bonding concepts that had not yet been discovered, the benefits of such an evolution were minimal at best. 2 Advancements in bonding technology would go hand in hand with the success of acrylic resins.

The types of restorative materials selected by the general dentist are: (1) amalgam, which is the clinical name for silver fillings (this restorative material, first introduced in 1826, was perfected by G.V. Black in 1895); (2) composite resins, which are becoming the most widely accepted material of choice by dentists and patients because of their natural appearance and new advances in their strength; (3) cements, which are a group of dental materials that provide a temporary or permanent ...
