This book discusses the concept and practice of a smart metropolitan region, and how smart cities promote healthy economic and spatial development. It highlights how smart metropolitan regional development can energize, reorganize and transform the legacy economy into a smart economy; how it can help embrace Information and Communications Technology (ICT); and how it can foster a shared economy. In addition, it outlines how the five pillars of the third industrial revolution can be achieved by smart communities. In addition, the book draws on 16 in-depth city case studies from ten countries to explore the state of the art regarding the smart economy in smart cities – and to apply the lessons learned to shape smart metropolitan economic and spatial development.

This book presents fundamental and applied research aimed at the development of smart cities across India. Based on the exploration of an extensive array of multidisciplinary literature, this book discusses critical factors of smart city initiatives: management and organization, technology, governance, policy, people and communities, economy, infrastructure, and natural environment. These factors are broadly covered under the integrative framework of the book to examine the vision and challenges of smart city initiatives. The book suggests directions and agendas for smart city research and outlines practical implications for government professionals, students, research scholars and policy makers. A lot of work is happening on smart cities as it is an upcoming area of research and development. At international level, and even in India, the concept of smart cities concept is a hot topic at universities, research centers, ministries, transport departments, civic bodies, environment, energy and disaster organizations, town planners and policy makers. This book provides ideas and information to government officials, investors, experts and research students.

" A Guide to Planning Norms & Development Controls in Delhi" A Publication that every resident of Delhi must read

Economic challenges in developing Asian countries have become more complex: urban populations are growing at great cost to the environment, climate change has increased risks of natural disasters, and income gaps within and between developing countries are widening. These factors threaten the sustainable growth and development of urban areas, the drivers of Asia's economy. A strategic approach for inclusive growth is needed. The City Cluster Economic Development approach provides a strategic framework and a set of analytical tools, which governments, businesses, and communities can use to support the inclusive and sustainable development of competitive urban economies in Asia. Said approach was developed and tested by the Asian Development Bank to improve the basis for integrated planning and development of urban regions in Asia and the Pacific. It also elps urban managers and other city stakeholders identify action plans and determine priority investment areas.

This book provides cities with strategies and methodologies for applying land value capture financing schemes for capital-intensive transit and transit-related investments, based on the successful experiences of Mass Transit Railway Corporation in Hong Kong SAR, China, and Japanese railway companies in Tokyo metropolitan areas.

Transit Oriented Development: Making it Happen brings together the different stakeholders and disciplines that are involved in the conception and implementation of TOD to provide a comprehensive overview of the realization of this concept in Australia, North America, Asia and Europe. The book identifies the challenges facing TOD and through a series of key international case studies demonstrates ways to overcome and avoid them. The insights gleaned from these encompass policy and regulation, urban design solutions, issues for local governance, the need to work with community and the commercial realities of TOD.

This book provides an overview of the ecological indicators of landscape dynamics in the context of geographical landscape integration. Landscape dynamics depicts every change that occurs in the physical, biological, and cognitive assets of a landscape. To understand and interpret the complex physical, biological, and cognitive phenomena of landscapes, it is necessary to operate conceptually and practically on a broad range of spatial and temporal scales. Rapid land use changes have become a concern to environmentalists and planners because of their impacts on the natural ecosystem, which further determines socioeconomic dynamics. In this regard, the book discusses case studies that share new insights into how landscape patterns and processes impact small creatures, and how small creatures in turn influence landscape structure and composition. In turn, the relevant aspects of land use and land cover dynamics are covered, and the multi-faceted relationship between the substrata and ecological community is highlighted. The book is unique in its focus on the application of spatial informatics such as automatic building extraction from high-resolution imagery; a soil resource inventory for meeting the challenges of land degradation; hydrological modeling; the temporal variation analysis of glacier area and the identification and mapping of glacial lakes; morphometric analysis of river basins; and the monitoring and modeling of urban sprawl, among other features.

Two Years After They Had Been Resettled In Faridabad The 50,000 Refugees From Pakistan Were Driven To Near- Destitution When The Rehabilitation Ministry With Drew Relief Without First Creating Hand Account Of How This Challenge Was Met Through A Unique Experiment Of Labour Cooperatives, Which Turned Faridabad Into A Fledgling Industrial Township With An Equally Unique System Of Social Health, A NonColonial And Worker-Owned Industrial Enterprises, Till The Resentment Of A Colonial Mind Establishment Pulled It Apart.
