Rapid growth of Islamic banking in developing countries is accompanied with claims about its relative resilience to financial crises as compared to conventional banking. However, little empirical evidence is available to support such claims. Using data from Pakistan, where Islamic and conventional banks co-exist, we compare these banks during a financial panic. Our results show that Islamic bank branches are less prone to deposit withdrawals during financial panics, both unconditionally and after controlling for bank characteristics. The Islamic branches of banks that have both Islamic and conventional operations tend to attract (rather than lose) deposits during panics, which suggests a role for religious branding. We also find that Islamic bank branches grant more loans during financial panics and that their lending decisions are less sensitive to changes in deposits. Our findings suggest that greater financial inclusion of faith-based groups may enhance the stability of the banking system.

As part of its strategy to support global trade, the World Bank Group seeks to enhance trade finance in emerging markets. In 2005 the International Finance Corporation (IFC), part of the Bank Group, introduced the Global Trade Finance Program (GTFP) to support the extension of trade finance to underserved clients globally. This IEG evaluation found that overall, the GTFP was a relevant response to the demand to reduce risk in trade finance in emerging markets. The program significantly improved IFC's engagement in trade finance by introducing an open network of banks and a quick, flexible response platform to support the supply of trade finance. IEG's evaluation covers the program's operations from its inception in 2005 through FY2012. The program grew from a \$500 million annual commitment to \$5 billion in FY12. It accounted for 39 percent of total IFC commitments and has low costs—it accounted for 2.4 percent of IFC's capital use and 1.2 percent of its staff costs and has had no claims to date. It is profitable as well, although not to the extent originally expected, accounting for 0.6 percent of IFC's net profit. IEG found that the GTFP has particular additionality among higher-risk countries. In its early years, it was concentrated in these countries, particularly in Africa. During the global crisis, the program risk-mitigation instrument became relevant in much broader markets. Client feedback on the program has been positive. In its evaluation IEG does offer several recommendations to enhance its effectiveness, including on issues of transparency and reporting methods, as well as expanding the share of the program in needier markets. For development professionals, the lessons in this evaluation can be applied to private sector development situations, particularly mitigation of financing risks in emerging markets.

In recent years, we have seen massive fines and penalties dished out to almost every major bank in the world for breaking the law. Yet these banks are considered 'too big to indict' in today's world, due to the threat of destabilizing the financial system... Double Standards travels 25 years back to explore the story of a bank, with roots in the Middle East, that rose to prominence and became the fastest-growing bank in the world. It was called the Bank of Credit & Commerce International, known as BCCI, and became the 4th largest bank in the world by 1991. It became the bridge between the Third World and the West and at its height was bailing out governments in developing countries, like the IMF or World Bank. It was also a favourite port of call for some more notorious clientele, like the CIA, who used the bank to facilitate its covert operations overseas. The Bank of England and US authorities shut the BCCI down amidst allegations of fraud in July 1991, making over 14,000 employees redundant and leaving over 1 million customers out of pocket. Double Standards revisits the actions taken by the Bank of England and the regulatory authorities with regards to BCCI and carries out an academic analysis to compare its treatment with the major banking scandals following the global financial meltdown in 2008. The malpractice that BCCI was accused of was on par with a parking violation compared to the actions of the bigger banks of today, yet the fines and penalties to these banks are not as severe as the punishment meted out to BCCI. Why was the bank shut and, more importantly, who benefitted from its closure? This informative analysis of BCCI's rise and fall will appeal to those with an interest in finance and banking law.

The Kenya Gazette is an official publication of the government of the Republic of Kenya. It contains notices of new legislation, notices required to be published by law or policy as well as other announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week.
