The technique of facial reconstruction can help resolve many stalemates within identification investigations (Wilkinson, 2006). The ultimate aim of facial reconstruction is to recreate an in vivo countenance of an individual that sufficiently resembles the deceased person to allow recognition (Prag & Neave, 1997). In forensic situations it may contribute to their recognition and lead to positive identification.

~~Facial reconstruction — anatomical art or artistic anatomy —~~

Metrics. Book description. Forensic facial reconstruction is the reproduction of an individual's face from skeletal remains. Used when other forms of identification are very difficult or impossible, it can give a name to the dead in forensic cases, or in archaeological contexts, provide a tangible impression of real individuals from our past. This comprehensive work starts with a discussion of the importance of the face in society and the history of facial reconstruction, going on to ...

~~Forensic Facial Reconstruction — Cambridge Core~~

Forensic facial reconstruction (or forensic facial approximation) is the process of recreating the face of an individual (whose identity is often not known) from their skeletal remains through an amalgamation of artistry, anthropology, osteology, and anatomy.It is easily the most subjective—as well as one of the most controversial—techniques in the field of forensic anthropology.
