The longitudinal stability modes play a fundamental role in determining the longitudinal flying and handling qualities of an aircraft and it is essential that their characteristics must be "correct" if the aircraft is to be flown by a human pilot. A simplistic view of the human pilot suggests that he behaves like an adaptive

Relaxed stability designs are not limited to military jets. The McDonnell Douglas MD-11 has a relaxed stability design which was implemented to save fuel. To ensure stability for safe flight, an LSAS (Longitudinal Stability Augmentation
