Online Library Pogil Ap Biology Cell Cycle Regulation Answers

The cell cycle is an ordered series of events involving cell growth and cell division that produces two new daughter cells. Cells on the path to cell division proceed through a series of precisely timed and carefully regulated stages of growth, DNA replication, and division that produces two identical (clone) cells.

The cell cycle consists of sequential stages of interphase (G₁, S, G₂), mitosis, and cytokinesis. b. A cell can enter a stage (G₀) where it no longer divides, but it can reenter the cell cycle in response to appropriate cues. Nondividing cells may exit the cell cycle or be held at a particular stage in the cell cycle.
