Virtual work isn't the model of the future-it's here now. But many companies struggle with setting their employees free from the office without sacrificing culture. Centric Consulting president Larry English is here to guide the way. Twenty years ago, Larry and his friends weren't happy in their consulting jobs. The long hours took a serious toll on their personal lives. So they built their own company where employees could work virtually and the culture would contribute to both the business's success and employee happiness. Since then, Centric Consulting has expanded to over 1,000 team members with operations in 12 US cities and India-and everyone works remotely some or most of the time. As Larry unpacks everything he's discovered about creating and sustaining a culture of collaborative teams, you'll learn: How and why you need to cultivate an atmosphere of trust in a virtual environment How to recruit and hire team members for remote work How to build strong relationships with people you don't see every day How to scale your virtual company without sacrificing culture How the right software tools can help build culture How to be a great virtual team member Sprinkled with funny, insightful stories from Larry and other Centric employees, *Office Optional: How to Build a Connected Culture with Virtual Teams* is the ultimate guidebook to remote work and a successful virtual culture.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center
