This work presents a unique approach to a hands-on business communication course. The modular structure allows teachers to focus on specific skills and provides greater flexibility for short courses and different teaching approaches.

Business Communication: Making Connections in a Digital World, 12/e by Lesikar, Flatley, and Rentz provides both student and instructor with all the tools needed to navigate through the complexity of the modern business communication environment. At their disposal, teachers have access to an online Tools & Techniques Blog that continually keeps them abreast of the latest research and developments in the field while providing a host of teaching materials. Business Communication attends to the dynamic, fast-paced, and ever-changing means by which business communication occurs by being the most technologically current and pedagogically effective books in the field. It has realistic examples that are both consumer-and business-oriented.

Data Mining: Concepts and Techniques provides the concepts and techniques in processing gathered data or information, which will be used in various applications. Specifically, it explains data mining and the tools used in discovering knowledge from the collected data. This book is referred as the knowledge discovery from data (KDD). It focuses on the feasibility, usefulness, effectiveness, and scalability of techniques of large data sets. After describing data mining, this edition explains the methods of knowing, preprocessing, processing, and warehousing data. It then presents information about data warehouses, online analytical processing (OLAP), and data cube technology. Then, the methods involved in mining frequent patterns, associations, and correlations for large data sets are described. The book details the methods for data classification and introduces the concepts and methods for data clustering. The remaining chapters discuss the outlier detection and the trends, applications, and research frontiers in data mining. This book is intended for Computer Science students, application developers, business professionals, and researchers who seek information on data mining. Presents dozens of algorithms and implementation examples, all in pseudo-code and suitable for use in real-world, large-scale data mining projects Addresses advanced topics such as mining object-relational databases, spatial databases, multimedia databases, time-series databases, text databases, the World Wide Web, and applications in several fields Provides a comprehensive, practical look at the concepts and techniques you need to get the most out of your data
