Surgical Technique of the Abdominal Organ Procurement to ...
Background: The ideal body is characterized by a muscular physique and defined anterior abdominal wall. Despite diet and exercise, many are unable to achieve this desired result. Liposuction with abdominal etching is used to achieve high-definition abdominal aesthetics. The etching technique is performed with liposuction in a superficial plane, to create indentures consistent with "six-pack abs," or definition of vertical abdominal lines.

Abdominal Etching: Surgical Technique and Outcomes ...
Background: Technique of abdominal wall closure (AAWC) determines wound related surgical complications. Residents in obstetrics & gynaecology and surgery departments perform most midline abdominal wall closure; we lack data on how it 's being done. This study identifies abdominal wall closure techniques used.

Technique of Midline Abdominal Incision Closure ... - Surgery
However, successful initial abdominal wall revascularization in the setting of visceral organ transplantation can pose a major challenge as graft ischemia time, operating in a limited surgical field, and variable recipient and donor anatomy must be considered. Several techniques have been reported to accomplish abdominal wall revascularization.

Surgical Techniques for Revascularization in Abdominal ...
Each surgical procedure is explained step by step and supported with high-resolution serial intra-operative photographs and line diagrams. While the majority of the text covers the surgical anatomy, classification, pathophysiology, and imaging techniques for hernias, a closing chapter on future directions introduces readers to the latest and emerging techniques and approaches.

Surgical Technique of the Abdominal Organ Procurement ...
As abdominal swelling decreases, the fascial edges are pulled closer together. The Wittmann patch is opened at least once every 24 to 36 hours for dressing changes, procedures, inspections, and reapproximations. When the two fascial edges are close enough, the remaining patch material is removed and the abdominal wall closed fascia-to-fascia.
