~~Sears and Zemansky's University Physics by CTI Reviews ...~~

Mark Waldo Zemansky (May 5, 1900 – December 29, 1981) was an American physicist and for decades was Professor of Physics at the City College of New York. He is best known for co-authoring University Physics, a highly regarded introductory physics textbook, with Francis Sears (thus, this book is often referred to as "Sears and Zemansky").

University Physics with Modern Physics, Twelfth Edition continues an unmatched history of innovation and careful execution that was established by the bestselling Eleventh Edition. Assimilating the best ideas from education research, this new edition provides enhanced problem-solving instruction, pioneering visual and conceptual pedagogy, the first systematically enhanced problems, and the most pedagogically proven and widely used homework and tutorial system available. Using Young & Freedman's research-based ISEE (Identify, Set Up, Execute, Evaluate) problem-solving strategy, students develop the physical intuition and problem-solving skills required to tackle the text's extensive high-quality problem sets, which have been developed and refined over the past five decades. Incorporating proven techniques from educational research that have been shown to improve student learning, the figures have been streamlined in color and detail to focus on the key physics and integrate 'chalkboard-style' guiding commentary. Critically acclaimed 'visual' chapter summaries help students to consolidate their understanding by presenting each concept in words, math, and figures. Renowned for its superior problems, the Twelfth Edition goes further. Unprecedented analysis of national student metadata has allowed every problem to be systematically enhanced for educational effectiveness, and to ensure problem sets of ideal topic coverage, balance of qualitative and quantitative problems, and range of difficulty and duration. This is the standalone version of University Physics with Modern Physics, Twelfth Edition.

Questions, exercises and problems after each chapter

For more than five decades, Sears and Zemansky's College Physics has provided the most reliable foundation of physics education for students around the world. The Ninth Edition continues that tradition with new features that directly address the demands on today's student and today's classroom. A broad and thorough introduction to physics, this new edition maintains its highly respected, traditional approach while implementing some new solutions to student difficulties. Many ideas stemming from educational research help students develop greater confidence in solving problems, deepen conceptual understanding, and strengthen quantitative-reasoning skills, while helping them connect what they learn with their other courses and the changing world around them. Math review has been expanded to encompass a full chapter, complete with end-of-chapter questions, and in each chapter biomedical applications and problems have been added along with a set of MCAT-style passage problems. Media resources have been strengthened and linked to the Pearson eText, MasteringPhysics®, and much more. This package contains: College Physics, Ninth Edition

KEY BENEFIT: For more than five decades, Sears and Zemansky's College Physics has provided the most reliable foundation of physics education for readers around the world. For the Eighth Edition, Robert Geller joins Hugh Young to produce a comprehensive update of this benchmark text. A broad and thorough introduction to physics, this new edition carefully integrates many solutions from educational research to help readers to develop greater confidence in solving problems, deeper conceptual understanding, and stronger quantitative-reasoning skills, while helping them connect what they learn with their other courses and the changing world around them. **KEY TOPICS:** Models, Measurements, and Vectors, Motion along a Straight Line, Motion in a Plane, Newton's Laws of Motion, Applications of Newton's Laws, Circular Motion and Gravitation, Work and Energy, Momentum, Rotational Motion, Dynamics of Rotational Motion, Elasticity and Periodic Motion, Mechanical Waves and Sound, Fluid Mechanics, Temperature and Heat, Thermal Properties of Matter, The Second Law of Thermodynamics, Electric Charges, Forces and Fields, Electric Potential and Electric Energy, Electric Current and Direct-Current Circuits, Magnetism, Magnetic Flux and Faraday's Law of Induction, Alternating Currents, Electromagnetic Waves, Geometric Optics, Optical Instruments, Interference and Diffraction, Relativity, Photons, Electrons, and Atoms, Atoms, Molecules, and Solids, 30 Nuclear and High-Energy Physics For all readers interested in most reliable foundation of physics education.
