This book is a celebration of women in science, technology, medicine and business at Imperial College London. It shows the inspirational role women played in the creation of the legacy of the College since its inception, and represents a guide to their achievements. Biographies and archive material provide an insight into their academic work and social lives, while first-hand information collected for individual cases gives a comprehensive overview of student and professional life in their diverse fields and subjects. Further careers as academics and businesswomen are also documented, demonstrating the importance of and wider social impact of women in the sciences.

This book is a celebration of women in science, technology, medicine and business at Imperial College London. It shows the inspirational role women played in the creation of the legacy of the College since its inception, and represents a guide to their achievements. Biographies and archive material provide an insight into their academic work and social lives, while first-hand information collected for individual

cases gives a comprehensive overview of student and professional life in their diverse fields and subjects. Further careers as academics and businesswomen are also documented, demonstrating the importance of and wider social impact of women in the sciences.

For hundreds of years it was common sense: women were the inferior sex. Their bodies were weaker, their minds feeble, their role subservient. Science has continued to tell us that men and women are fundamentally different. But a huge wave of research is now revealing that women are as strong, powerful, strategic, and smart as anyone else. Saini takes readers on a journey to uncover science's failure to understand women and to show how women's bodies and minds are finally being rediscovered.

'The book neatly illuminates a forgotten history of female chemists — and this is not an overstatement. It contains a multitude of names, events and socio-economic interactions in the pursuit of women's education and professional emancipation that are guaranteed to contain stories that readers will not have heard before ... It is easily a dip-in and dip-out type of read, allowing simple navigation to specific areas of Britain, disciplines and professions ... Besides highlighting the women who fought against an inherently male-dominated system and celebrating their supporters, this book also examines the events and the history surrounding their lives and endeavours. It pays particular note to the nations of the British Isles and gives equal contribution to those lost in history as to those names we are all so familiar with. A fantastic resource that has been excellently researched, I am sure it will remain an ageless tribute and reference work.' Education in Chemistry Historically, British chemistry has been perceived as a solely male endeavour. However, this perception is untrue: the allure of chemistry has attracted British women for centuries past. In this new book, the authors trace the story of women's fascination with chemistry back to the amateur women chemists of the late 1500s. From the 1880s, pioneering academic girls' schools provided the knowledge base and enthusiasm to enable their graduates to enter chemistry degree programs at university. The ensuing stream of women chemistry graduates made interesting and significant contributions to their fields, yet they have been absent from the historical record. In addition to the broad picture, the authors focus upon the life and contributions of some of the individual women chemists who were determined to survive and flourish in their chosen field. From secondary school to university to industry, some of the women chemists expressed their sentiments and enthusiasm in chemistry verse. Examples of their poetic efforts are sprinkled throughout to give a unifying theme from grade school to university and industrial employment. This book provides a well-researched glimpse into the forgotten world of British women in chemistry up to the 1930s and 1940s.

This is the first major history of Imperial College London. The book tells the story of a new type of institution that came into being in 1907 with the federation of three older colleges. Imperial College was founded by the state for advanced university-level training in science and technology, and for the promotion of research in support of industry throughout the British Empire. True to its name the college built a wide number of Imperial links and was an outward looking institution from the start. Today, in the post-colonial world, it retains its outward-looking stance, both in its many international research connections, and with staff and students from around the world. Connections to industry and the state remain important. The College is one of Britain's premier research and teaching institutions, including now medicine alongside science and engineering. This book is an in-depth study of Imperial College; it covers both governance and academic activity within the larger context of political, economic and socio-cultural life in twentieth-century Britain."

Volume 19 of the Australian Dictionary of Biography (ADB) contains concise biographies of individuals who died between 1991 and 1995. The first of two volumes for the 1990s, it presents a colourful montage of late twentieth-century Australian life, containing the biographies of significant and representative Australians. The volume is still in the shadow of World War II with servicemen and women who enlisted young appearing, but these influences are dimming and there are now increasing numbers of non-white, non-male, non-privileged and non-straight subjects. The 680 individuals recorded in volume 19 of the ADB include Wiradjuri midwife and Ngannawal Elder Violet Bulger; Aboriginal rights activist, poet, playwright and artist Kevin Gilbert; and Torres Strait Islander community leader and land rights campaigner Eddie Mabo. HIV/AIDS child activists Tony Lovegrove and Eve Van Grafhorst have entries, as does conductor Stuart Challender, 'the first Australian celebrity to go public' about his HIV/AIDS condition in 1991. The arts are, as always, well-represented, including writers Frank Hardy, Mary Durack and Nene Gare, actors Frank Thring and Leonard Teale and arts patron Ian Potter. We are beginning to see the effects of the steep rise in postwar immigration flow through to the ADB. Artist Joseph Stanislaw Ostojka-Kotkowski was born in Poland. Pilar Moreno de Otaegui, co-founded the Spanish Club of Sydney. Chinese restaurateur and community leader Ming Poon (Dick) Low migrated to Victoria in 1953. Often we have a dearth of information about the domestic lives of our subjects; politician Olive Zakharov, however, bravely disclosed at the Victorian launch of the federal government's campaign to Stop Violence Against Women in 1993 that she was a survivor of domestic violence in her second marriage. Take a dip into the many fascinating lives of the Australian Dictionary of Biography.

Clouds are the spark plugs in the heat engine of the tropical atmosphere, and heat from the tropics drives the planet's general circulation. Atmospheric scientists didn't know this in the 1950s, but Joanne Simpson, the first American woman to earn a Ph.D. in meteorology, did. Most histories of meteorology focus on polar and temperate regions and the accomplishments of male scientists. They marginalize or erase completely the contributions of female researchers. Joanne's work on the tropical atmosphere did not fit this pattern. Joanne had a lifelong passion for clouds and severe storms. She flew into and above them, photographed them, modeled them, attempted to modify them, and studied them from all angles. She held two university professorships, married three times, had two lovers (one secret), mentored a generation of meteorologists, and blazed a trail for other women to follow. This book is about Joanne's personal and professional life, her career prospects as a woman in science, and her relationship to the tropical atmosphere. These multifaceted and interacting textual streams constitute a braided narrative and form a complex dynamic system that displays surprising emergent properties. Is Joanne Simpson best remembered as a pioneer woman scientist or the best tropical scientist of her generation? She was both, with the emphasis on best scientist.

and with staff and students from around the world. Connections to industry and the state remain important. The College is one of Britain's premier research and teaching institutions, including now medicine alongside science and engineering. This book is an in-depth study of Imperial College; it covers both governance and academic activity within the larger context of political, economic and socio-cultural life in twentieth-century Britain. Contents: Introduction Before Imperial: The Colleges that Federated in 1907 The Founding of Imperial College Governance and Innovation, 1907–43 Imperial College during the First World War Continuity within the Three Old Colleges, 1907–45 Imperial Science at Imperial College Imperial College during the Second World War Expansion: Post-War to Robbins, 1945–67 (Part One) Expansion: Post-War to Robbins, 1945–67 (Part Two) Corporate and Social Life The Making of the Modern College, 1967–85: Part One-Governance in a New Political Climate The Making of the Modern College, 1967–85: Part Two: Academic Restructuring Diversifying the Curriculum The Expanding College, 1985–2001 ... Part One: Governance and the Medical School Mergers The Expanding College, 1985–2001 ... Part Two: Some Academic Developments Conclusion Readership: Academic libraries, alumni, staff and students of Imperial College, historians of science, technology and medicine, and historians of twentieth-century Britain. Keywords: History; Imperial College; Science; Technology; Medicine; Higher Education; Research Reviews: "Accessibility and vast reference material justifies The History of Imperial College London's place on the bookshelf of any institutional historian of science and technology. Gay has provided a well-researched glimpse into the broader role of higher education in 20th century British history." History and Philosophy of the Life Sciences "Overall the author has admirably succeeded in fulfilling her aims by producing an account that is both scholarly and accessible. She has also judiciously balanced detailed accounts of departments and research programmes with attention to the wider institutional, political, economic and social context that determined the resources they had available to them ... it deserves a place as an important reference work for anyone interested in the history of science and technology or of higher education in Britain during the twentieth century." AMBIX "Overall, Gay's history of Imperial College is an invaluable source of information not only on the college's history, but more broadly on the history of science, technology and medicine in the United Kingdom during the twentieth century." The British Journal for the History of Science

A systematic survey and comparison of the work of 19th-century American and British women in scientific research, this book covers the two countries in which women of the period were most active in scientific work and examines all the fields in which they were engaged.
